

The Institute for Defense Analyses is currently inviting applications for research staff positions. The Science and Technology Division is looking for PhDs in sciences and engineering. We work exclusively for the executive branches of the government. Defence is a big part of it but we also work for other agencies (HLS, DoE, NGA, etc). If you are interesting in applying, this is a really good time. If you'd like to talk to me about it, feel free to give me a call. (703-578-2986)

Joan Cartier, Ph.D.
Assistant Director of Science Technology Division
Institute for Defense Analyses
4850 Mark Center Drive

Subject: [AAASFellows] More information on Institute for Defense Analyses is recruiting Research Staff

I apologize, I am having a little trouble keeping up with the number of requests for more information!. IDA has a greater variety of research areas than I could cover in a simple email. So let me urge you to check out our website for an introduction (www.ida.org <<http://www.ida.org/>>) and take a look at the menu item on the bottom of the page labeled career. Then send me a copy of your resume and I'll make sure it gets into the right hands. If your resume is appropriate for the Science and Technology Division, I'll give you a call. If it is appropriate for one of our other Divisions I'll forward it onto them.

Joan Cartier, Ph.D.
Assistant Director of Science Technology Division
